Senate Bill 864 (as introduced 11-1-07)  
Sponsor: Senator Patricia L. Birkholz  
Committee: Energy Policy and Public Utilities

Date Completed: 1-7-08

**CONTENT**

**The bill would amend Part 115 (Solid Waste Management) of the Natural Resources and Environmental Protection Act to allow yard clippings to be disposed of in a landfill that was a landfill energy production facility, and require the owner or operator of such a facility to submit an annual report on the amount of gas recovered and its uses.**

Part 115 prohibits a person from knowingly delivering to a landfill for disposal, and prohibits a landfill owner or operator from knowingly permitting disposal in the landfill of, more than a de minimis amount of yard clippings, unless they are diseased or infested. Under the bill, this prohibition would not apply if the landfill were a landfill energy production facility.

The bill would define "landfill energy production facility" as a landfill that meets the following requirements:

- The landfill's operating license authorizes the recovery of gas produced by waste in the landfill as a source of energy for a demonstrated use.
- An operable gas collection system exists or is planned for those cells of the landfill where yard clippings are disposed of.

Part 115 requires a landfill owner or operator to submit an annual report to the State and the county and municipality in which the landfill is located. The report must contain information on the amount of solid waste the landfill received during the year itemized, to the extent possible, by county, state, or country of origin; and the amount of remaining disposal capacity at the landfill. Under the bill, if the landfill were an energy production facility, the report also would have to include the amount of gas recovered during the year and the use to which it was put as a source of energy.

**FISCAL IMPACT**

Currently, yard clippings must be separated from other types of solid waste and may not be disposed of in landfills. They are transported to recycling and composting facilities for disposal. Under the bill, yard clippings could be disposed of in landfills that were also landfill energy production facilities. Some of the major landfills in Michigan could qualify for this designation. Since individuals and solid waste haulers would no longer have to separate solid waste, it is likely that the recycling and composting facilities would no longer receive any yard clippings, which is a significant portion of their businesses. Business tax

collections would not be significantly affected since the yard clippings would be going to different businesses. Composting facilities would be operating on a much smaller scale with less revenue received and lower taxes paid, while certain landfills would generate additional revenue and pay additional taxes. Business revenue is deposited into the General Fund.

Since landfills would be accepting a greater amount of waste, the surcharge of seven cents per cubic yard on solid waste that is paid by landfills would generate additional revenue. Revenue from the surcharge is deposited into the Solid Waste Program Fund and used exclusively for the solid waste management program.
